

What's New in 3.3.x

There are lots of new features and improvements in the 3.3 update!

- Frame-relative time added to Overlay Items (IL / TS / HS cameras):
 - This allows you to quickly and precisely keep track of time between events
- Cut-in / Cut-out Sync button for multi-camera control in FasMotion (IL / TS / HS cameras)
 - Synchronizes Start/Stop points for playback and Saves for all cameras
- FasMotion CAP file processing has been improved for HS5 and HS7
 - Enhanced workflows on HS Series cameras utilize saved CAP files on any media reviewed in FasMotion, often with the camera offline
 - Color (or Mono) CAP files played back in FasMotion look great
- Improved Lens Control for HS Series cameras
 - = Step control for focus N / F (near/far) buttons
 - Improved compatibility for some lenses
- Enhanced FasFire for HS Series cameras
 - = Live view during saves
 - = Faster Save times on some external SSDs
 - = Frame continuity is perfectly maintained between partition captures
 - = Review saved CAPs while recording in FasFire: video
- I/O port radio buttons glow green in FasMotion for HS Series cameras
 - Indicates presence of signal, confirms connectivity
